

Setup checklist

Three tools, one row each. If something will not open, that is useful information: write the exact error text and the time. A recorded blocker gets fixed. A hidden one costs you the SQL session on 27 September.

Name _____ TA group _____

Tool	Working means	Working?	If not: exact error text and the time
BigQuery Sandbox	You are signed in, you can open a public dataset and preview one table. No credit card is needed. If it asks for one, stop and record it.		
GitHub	You are signed in and you can create a new repository. A personal account is fine. You do not need an organisation.		
Power BI Desktop	It opens on a Windows machine, or you have recorded the lab machine route. Power BI Desktop does not run on macOS or Linux. Record it and we arrange the lab route.		

Never write a password, a verification code or an account recovery answer on this sheet. Staff will never ask you for one. Hand this in before you leave; it is not graded.
